Summary of Phone Comment

Commentor indicated that Delaware should not approve any nuclear energy power plants. These plants radiate people and are hazardous. New generation needs to be either coal or gas. We need generation because buying energy in the market is too expensive just like gasoline. Energy prices are a ripoff and need to be lowered. Delaware should not have any companies like Delmarva that don't have their own generation.

Commentor noted that he used to carry a gun in Pennsylvania and was worried about all the crime in major cities. He thinks Wilmington is one of the safer places to live.

Commentor indicated they tried to get a \$50,000 grant from Mike Castle to study the possibility of building a bridge-tunnel between Cape May and Lewes DE. Commentor requested that I mention it to Governor Minner when I saw her.

Summary of Phone Comment

Commentor said we needed to use the big generator in the sky. He has worked at power plants and utilities and knows we can use natural sunlight to heat the water for generation. He uses a copper coil to heat the water at his house in the summer and can show the utilities how to do it. He noted that he believes a lot of heat energy at power plants is wasted and not necessarily needed. He has used glass to start fires and knows that solar energy could be easily used to heat the water at power plants.
